COVER LETTER

Dear Hiring Manager,

I'm a full-stack software developer from Bangkok with nearly two years of professional experience, and I'm looking for my next role with a team in the UK. I'd be glad to relocate with visa sponsorship, and I'm just as happy to work remotely for a UK team. My core strength is backend engineering in C# and .NET, and I build across the whole stack with Next.js, React and TypeScript.

I currently work full-time and fully remote as a Software Developer at BusOnlineTicket, across both backend and frontend. I implement new features end to end, integrate new vendors to bring in their data, and build tools to manage trips and routes. I've also built a LINE chatbot, a payment gateway integration, and integrations with Facebook and Google (including pulling customer reviews from Google), and I work directly with vendors on requirements and go-live. Before that, I spent two years at Sirisoft Public Company Limited working on enterprise systems in an Agile Scrum team, where I:

- designed and built .NET backend APIs for e-Quotation, e-Commerce and car sales platforms;
- deployed services on OpenShift with Docker and supported CI/CD with Tekton pipelines;
- optimised database queries and API handling for better performance and reliability;
- integrated Oracle WebCenter Content and K2 workflows, and helped design the API specification for an AI data-ingestion workflow;
- kept quality high with SonarQube and regular code reviews.

Outside work I build and ship my own products. Maru Desk is a live invoicing and payments tool for small Thai businesses, built with Next.js. My portfolio, NurOS, is a desktop operating system in the browser with an AI assistant that answers questions about my work from my own documents and cites its sources. I've also prototyped a private, self-hosted LLM platform with Ollama, RAG and model evaluations.

I like to plan, analyse and design before I write code, and I'm comfortable doing business and system analysis and UX/UI work alongside development. I learn new technologies quickly and enjoy sharing what I learn with teammates. Bangkok's working day overlaps with UK mornings, and I'm used to clear, written, asynchronous communication.

I'd love to bring this mix of solid backend experience and end-to-end product building to your team. Thank you for your time. I'd be happy to talk, and the best way to reach me is by email.

Kind regards,

Nurarat Sangreuang
